

MIPS:E2 Product data

Material/Components

Polycarbonate sheet

Four-way stretch fabric

Separate from comfort liner

Description

The MIPS:E2 solution is a soft, cap-like insert that acts as a full-headed low-friction layer for full-face cycling, motocross, and street sport helmets.

The MIPS:E2 liner is made up of two multi-directional, stretch fabric layers sewn together around a thin, plastic foil. When inserted between the comfort padding of the helmet and the outer EPS shell, the Liner provides broad coverage from rotational impacts without sacrificing comfort or sweat absorption.

The design enables the full 10-15mm of rotational movement in the crucial 2-3 milliseconds following an angled head impact, redirecting damaging rotational motion.
